SPM-562M Case Sealer

Mini type for small boxes

Side Belt Drive

Features:

The SPM-562M uses a new taping head incorporating a V shaped plate (patented) designed to keep the tape straight and in position for consistent sealing of every carton. This design is superior to previous blower devices. Driven by two side drive belts, each belt has a separate drive mechanism using a special bearing bracket. This provides higher precision, lower noise and lengthens belt life. Tape overlap length can be adjusted from 55mm-65mm.

Machines come standard with infeed and outfeed extension roller tables.
